

## Read-2

## Seeds

A seed is a little plant . It is a plant that has not started to grow .  
Some seeds grow fast . Some grow slow .

All seeds have covers . Some are very big . Others are very small .

When water soaks into the seed , the seed begins to grow . The seed first sends a tiny root down into the earth . Then it sends a stem above . The stem is a little plant . It is called a sprout . The plant and the roots grow bigger and longer .

Some seeds travel .The wind and water carry seeds .

Some seeds get eaten by man or animals. All seeds need earth , water , and sunlight to grow .

**Read the story again , and underline the correct answers for these questions :**
