English EXAM n°2

Class :

Name :

...../ 20

Text

Born around a thousand years ago (965-1040) in present day Iraq, Al-Hassen Ibn Al-Haitham was a great scientific thinker **who** made important contributions to the world.

Ibn Al Haitham lived during a creative period known as " **The Golden Age**" of muslim civilization **which** saw many fascinating advances in science, technology and medicine.

Ibn Al Haitham wanted to understand what light is, how it works and how humans see objects. He was the first who disproved the ancient Greek idea that light comes out of the eyes. He studied and experimented to prove that light enters the eye rather than leaving it. This discovery was truly revolutionary.

He wrote more than 96 books; only 55 are known to have survived. Those related to the subject of light include: "*The Light Of The Moon*", "*The Light Of Stars*", "*The Rainbow and The Halo*" and "*The Formation Of Shadows*". His main book "*Kitab al Manazir*" **which** was translated to many languages made radical changes in the western optical traditions.

Through his researches, Ibn Al Haitham made important contributions to our understanding of light, optics and vision. He is known as "*the father of optics*". His most famous invention is the Camera Obscura : the Pinhole Camera. He also had great impact on thinkers and scientists **that** came after him such as Issac Newten who was aware of Ibn Al Haitham's works.

Questions

Reading and comprehension:07pts

1. Read the text and answer the questions:

- In which period did Ibn Al-Haitham live?
- What is Ibn Al Haitham known as?
