

The first Term English Exam

The Text :

Steve Paul Jobs was born in San Francisco, California on February 24, 1955. His birth parents gave him up for adoption and he was adopted by Paul and Clara Jobs. When Steve was five, the family moved to Mountain View, California where Steve went to school and grew up. One of Steve's favorite hobbies growing up was working with electronics in his garage with his dad. They would take apart electronics like radios and then put them back together. Steve was a smart student, but got bored with school.. When he was thirteen, Jobs met eighteen-year-old Steve Wozniak. Wozniak was also into electronics and the two boys became friends. Jobs began hanging out with Steve Wozniak again and the two of them were very interested in computers. Wozniak wanted his own personal computer and, being the electronics genius he was, he invented his own computer. Jobs was impressed. He said they should start their own company selling the computer and Wozniak agreed. In 1976, they formed the company Apple Computer and called their first computer the Apple I. They began making the computers in Jobs' garage. Jobs was just 21 years old . Wozniak then started working on the next version called the Apple II. Jobs could tell that this was going to be a great product. He sold the idea to some investors convincing them to invest in the company. In 1997, Apple ended up purchasing NeXT from Jobs. He then returned to the company as the CEO. Apple was struggling at the time and needed some new ideas. With Jobs at the helm, Apple began to branch out into new products. They introduced the iPod music player. Both were a huge success and gave Apple a new image of being on the cutting edge of consumer electronics. In 2007, Apple introduced the iPhone which changed the way phones were used and took the mobile phone market by storm. Jobs became a celebrity and was considered by many to be one of the great innovators of the 2000s. Steve Jobs died on October 5, 2011 from pancreatic cancer. He had fought cancer for several years since first being diagnosed in 2003.
